

Time, the most fundamental certainty in our lives, yet, does it exist? What is it? Can we influence it? Mold it? Ever go back?

This exhibition is about time, time that is measured, time that is capitalised, time that is free, time that is controlled, productive time, unproductive time, truly-lived time, wasted time, in-between-times, new beginnings, shared futures, arguable pasts, traces, symmetries, possible futures, preferable futures and Absolute Elsewhere. After all, Figure 2.4 comes from special relativity. And space-time is curved. And so are us.
